

ISI Vertical Traction System for only \$275

The ISI Digi Grip, Traction Strap and S-hooks work together to create an outstanding upper extremity traction system

Simple and Versatile

The ISI Digi Grip works with your I.V. Pole or traction boom while the ISI Traction Strap provides counter-traction on the patient's humerus. The patient's fingers are secured by ISI Finger Traps attached to the Digi Grip. The result is a cost-effective upper extremity traction apparatus for setting fractures, casting, wrist arthroscopies and more.

Stock	No. Description	Price
